BIT	NAME	VALUE	FUNCTION
D7	Command Bit, C	0	Must be logic 0 for these commands.
		1	These commands are invalid if this bit is logic 1.
D6	Access Registers as Arrays, ARA	0	Ignore this function.
		1	Access the respective registers, offset, gain, or channel-setup, as an array of registers. The particular registers accessed are determined by the RS bits. The registers are accessed MSB first with physical channel 0 accessed first followed by physical channel 1 next and so forth.
D5-D4	Channel Select Bits, CS1-CS0	00	CS1-CS0 provide the address of one of the two (four for CS5533/34) physical input channels. These bits are also used to access the calibration registers associated with the respective physical input channel. Note that these bits are ignored when reading data register.
